

# **Enviro-Save New Diesel Engine Metal Treatment Instruction Sheet**

The New Diesel Engine Crankcase Metal Treatment (green tint) is formulated only for Diesel Engines that have less than 100,000kms or 65,000 miles of highway driving and not city driven mileage, or as per the following.

**Acceptable Diesel Engines for this special Enviro-Save Metal Treatment are:**

- 1) Automotive with less than 30,000kms / 20,000 miles and 2 oil changes.**
- 2) Commercial trucks with less than 100,000kms / 65,000 miles and 4 oil changes.**
- 3) Buses and Coaches with less than 50,000kms / 30,000 miles and 3 oil changes.**
- 4) School and Transit buses stop and go more than highway buses, so less than 40,000kms / 25,000 miles and 3 oil changes.**
- 5) Industrial and Stationary with less than 1000 hours and 4 oil changes.**

**Diesel Engines that are used for city driving or exceed the above mileage of highway driving must use the Enviro-Save Diesel Engine Pre-Treatment Cleaner prior to applying any Crankcase Metal Treatment.**

When a Diesel Engine is contaminated or dirty internally from improper oil change intervals or high mileage it is extremely important the rough bearing surface asperity is thoroughly cleaned of varnish, lacquer and carbon etc., so the Enviro-Save micro-resin will be permanently impregnated into all surfaces, thus reducing friction/wear permanently. Use Enviro-Save Pre-Treatment Diesel Engine Cleaner in engines that are dirty internally.

## **APPLICATION INSTRUCTIONS:**

**We recommend pouring the Enviro-Save New Diesel Engine Metal Treatment into the crankcase just prior to a minimum 1 hour of operating time or prior to leaving on a trip.**

After the oil and filter(s) change has been completed, check bottle cap, turn bottle upside down and agitate vigorously for a minimum 15 seconds so all the resin is in suspension. Make sure there is no resin remaining on the bottom of the bottle. Immediately pour Crankcase Metal Treatment into engine crankcase and operate engine for a minimum of 15 minutes before turning the engine off, if it is not possible to operate engine continuously for 1 hour.

[All our Products are backed by Insurance from Aon and Lloyds of London, Protecting Your interest.](#)
