

Mr. Roland Mullen

recommends using Enviro-Save Engine & Powertrain Protection Metal Treatment in all Mullen trucks & equipment.

**11.1% fuel saving over 1 year with 24 highway application trucks.
6.7% fleet fuel savings for Mullen Trucking, including heavy haul.**

On June 4, 2012 Mr. Roland Mullen purchased an Enviro-Save Powertrain Protection Kit for his 45' MCI Coach and kits for two of his automobiles. He was very impressed with the results and ordered additional automobile kits and Enviro-Save for his home tractor, mowers and recreational vehicles.

Mr. Mullen wanted to treat their new 100 ton Caterpillar trucks so we configured the Powertrain Protection kits, but the decision to wait for positive results from using Enviro-Save in the Mullen highway trucks postponed the progress.

Mr. Mullen then arranged for us to visit the truck shop in Aldersyde to give a presentation on Enviro-Save and on June 25, 2012 Mullen Trucking began purchasing Enviro-Save Powertrain Protection Kits for their trucks, automobiles and other miscellaneous products. The first treated truck runs Calgary to Surrey BC twice a week and the fuel savings is 9% with lower operating temperatures.

On August 28, 2013 Mr. Mullen called to inform us that 24 of their highway only Class 8 trucks had averaged 11.1% fuel savings over a year and that it was time to contact all the companies within the Mullen Group to reduce operating costs.

On February 25, 2014 we received email confirmation that Mullen Trucking's overall fleet fuel savings was 6.7%, which included heavy haul. Additional Gear

Treatment has been purchased to expand treating axle oil hubs and the Honda engines used on their heavy haul steering trailers.

Since 1990 the majority of our Class 8 highway customers report fuel savings of 6% to 9%, some higher. By using Enviro-Save in all the Mullen trucks, vehicles and equipment there is no reason annual company fuel costs cannot be reduced by 7% and significant reduction in maintenance costs. A 50% reduction in metal wear rates is normal and ONE TREATMENT normally doubles component life.

One Time Investment, One Time Application = Life Time Savings!

<http://envirosave.net>, there is nothing like Enviro-Save.
