Attention : Warren Casperson

Dear Warren;

As Service Manager for Able Copier Service, I would like to take this opportunity to say our experience with the applications of Enviro-Save Products have been very positive. We have been using Enviro-Save Metal Treatment in several areas of Photocopier maintenance. One such area is Heater (fusing) sections, an area within a Photocopier that is subject to extreme temperature changes, (heating and cooling) thus requiring maximum lubrication to moving parts such as metal bearings, brass, and bakelite bushings, drive gears, etc. We have experienced excellent results by applying the Enviro-Save Hi-Temp grease to these parts with at least 50% to 100% longer life.

Enviro-Save Metal Treatment is an excellent product, there is nothing on the market that can match its performance. We also have been applying this product to "Optical Scanner Assembly Rails" which experience excessive heat build-up caused by friction. The results have been excellent and have in turn decreased the need to lubricate these assemblies as often. This product is also applied to electric motor and magnetic clutch bearings. To date I have been most pleased with the results and quality of your products and will continue to use them in our Photocopier repairs and Maintenance, and our Automobiles

Sincerely
